A pressure regulator should be installed after the main line to help protect plumbing. The Cash Acme EB-45 is a half-cartridge based pressure reducing and regulating valve with a lead free bronze body. The valve resembles traditional regulators with a spring chamber and an adjusting screw but offers the high performance of a cartridge based valve.

When selecting a regulator for your application, proper sizing is critical. An undersized actuator will not pass the required flow, while an oversized regulator will not provide accurate regulation. Most manufacturers provide a free sizing program to aid in proper selection. Click here to go to our JVCV Sizing Program.

With most single-stage regulator regulators, except those that use a pressure compensated design, a large drop in inlet pressure will cause a slight increase in outlet pressure. This happens because the forces acting on the valve change, due to the large drop in pressure, from when the outlet pressure was initially set.
