### Production Engineering Oil And Gas

Petroleum production engineering is a subset of petroleum engineering.. Petroleum production engineers design and select subsurface equipment to produce oil and gas well fluids. They often are degreed as petroleum engineers, although they may come from other technical disciplines (e.g., mechanical engineering, chemical engineering, physicist) and subsequently be trained by an oil and gas company.

### Petroleum production engineering - Wikipedia

Production engineering A Production Engineer's job involves designing and selecting the equipment that will get the well to produce oil and gas after it is drilled. They coordinate the installation, maintenance and operation of the mining and oilfield equipment, and manage the boundary between the well and the reservoir using perforations , sand control , artificial lift , and downhole control .
