The Chemistry Of Heterocycles Structures

A good book if you are looking for knowledge about heterocycles (properties, preparation, reactivity) organized with an encyclopedic type style. Heterocycles of ring sizes 3-6 with N, O, or S, are thoroughly reviewed. A few fused ring systems are included as well, but I was disappointed to find that the book was lacking in this area.

The Chemistry of Heterocycles - 1st Edition

Compounds classified as heterocyclic probably constitute the largest and most varied family of organic compounds. After all, every carbocyclic compound, regardless of structure and functionality, may in principle be converted into a collection of heterocyclic analogs by replacing one or more of the ring carbon atoms with a different element.

Heterocyclic Chemistry

A heterocyclic compound or ring structure is a cyclic compound that has atoms of at least two different elements as members of its ring. Heterocyclic chemistry is the branch of organic chemistry dealing with the synthesis, properties, and applications of these heterocycles. Examples of heterocyclic compounds include all of the nucleic acids, the majority of drugs, most biomass, and many natural and synthetic dyes. 59% of US FDA-approved drugs contain nitrogen heterocycles.

Heterocycles - cyclic structures in which the ring atoms may include oxygen or nitrogen - can also be aromatic. Pyridine, for example, is an aromatic heterocycle.

The Chemistry of Heterocycles | ScienceDirect

Heterocycles are ubiquitously present in nature and occupy a unique place in organic chemistry as they are part of the DNA and haemoglobin that make life possible. The Chemistry of Heterocycles covers an introduction to the topic, followed by a chapter on the nomenclature of all classes of isolated, fused and polycyclic heterocycles.

The Chemistry of Heterocycles | ScienceDirect

In chemical terms, heterocycles are cyclic compounds containing at least one non-carbon atom, typically nitrogen, oxygen or sulfur. They come in two flavours: heteroaromatics such as pyridine where the heterocycle also has an aromatic, benzene-like structure, and saturated, non-aromatic like the commonly used solvent tetrahydrofuran.
